1.1 USER INTERFACES

The user interface of Luminae is designed to be intuitive and user-friendly, following a clean and minimalistic style. It incorporates standard design conventions used in most SaaS platforms. **Key features include:**

- **Screen Layout for Dashboards:** Each screen is divided into two primary sections—navigation on the left and content display on the right. Users can easily navigate between workspaces, tasks, community, and reports via a sidebar.
- **Standard Buttons and Functions:**
 - Common action buttons like **Save**, **Submit**, and **Cancel** are consistently placed at either the bottom left of forms, or cover the full form width.
 - Error messages are displayed inline near the form field where the error occurs, along with user-friendly descriptions of what needs correction.
